JAYACHANDRA M

Staff Software Engineer

Bengaluru | 9535491348 | m7jayachandra@gmail.com | WWW: https://jayachandra.dev/ | LinkedIn: linkedin.com/in/m7jay

Professional Summary

Staff Software Engineer with **7+ years** of experience building payments infrastructure on AWS. Architected an invoice platform integrating **~400** partner systems and processing **~₹100Cr+/day** within a 4-hour window, plus an event-driven webhook platform handling **~100K** events/day. Led the integrations team, introducing design reviews, incident practices, and partner integration standards for payment-critical flows.

Skills

Languages: Python/Django, Go

AWS: EC2, Lambda, Auto Scaling Groups, ECR, VPC, Route 53, ALB/ELB, API Gateway, RDS, DynamoDB, ElastiCache, S3, SQS, MSK (Kafka), Athena, Cloudwatch, IAM

Data and Messaging: Mysql, Redis, DynamoDB, Kafka, SQS

Infra and CI/CD: Terraform, Docker, Linux

Observability: OpenTelemetry, Prometheus, Grafana, Sentry

Architecture: Distributed systems, Microservices architecture, Event-driven architecture

Work Experience

Staff Software Engineer 10/2024 to 01/2026

Jodo – Bengaluru, Karnataka

- Architected and built the pull-integration invoice orchestration platform, retrieving real-time fee data from **400+** partner systems with upstream latency from sub-second to ~15 seconds and presenting invoices for automated debit via Digio and Easebuzz.
- Designed fault-tolerant workflows processing **~50K invoices/day** and ₹100Cr+/day within a **strict 4-hour** processing window, sustaining 99% upstream fetch success and ~5s p95 per-message latency. Scaled worker pools from 4 to 40 and EC2 Auto Scaling groups from 4 to 20 to absorb peak loads.
- Architected the event-driven webhook platform on MSK, Lambda, and EC2 with topic isolation, exponential-backoff retries, and event prioritization, delivering ~100K events/day at ~500ms p95 latency. Failed events are retained in durable S3 audit trails and are replayable from the integrations dashboard, and the platform absorbed 2x bulk-settlement spikes while partner endpoints varied in availability.
- Replaced per-request auth-service calls with a centralized Go authentication proxy that passes authenticated user and permission context to services via request headers, implementing RBAC across 6 internal services from a single layer and removing a network hop per request.
- Automated AWS infrastructure provisioning for dev and prod environments with Terraform, making environments reproducible and cutting provisioning time from ~24 hours to ~30 min, with zero manual configuration drift.
- Built monitoring and observability with OpenTelemetry, Prometheus, Grafana, CloudWatch, and Sentry, adding distributed tracing, dashboards, and alerting across the platform, reducing MTTD and MTTR from hours to mins.
- Led the 3-engineer integrations team (2 direct reports) owning payment-critical flows; introduced design docs, an architecture review process, and blameless incident reports, and authored integration documentation for external partners to speed up onboarding.

Senior Software Engineer 07/2021 to 09/2024

Jodo – Bengaluru, Karnataka

- Built and owned the push-integration REST API layer on API Gateway, ELB, and EC2 Auto Scaling groups inside a VPC, serving external partners at up to ~100K requests/day with p99 latency of ~500ms, monitored through CloudWatch alarms and Grafana dashboards.
- Reduced latency of a critical metadata service by ~75% (2s → ~500ms) by adding indexes for slow RDS queries and by eliminating redundant queries.
- Built the first version of webhook delivery system on AWS Lambda, giving partners near real-time notifications for payment events (later re-architected as the Kafka/MSK-based platform).

- Redesigned payment update workflows to guarantee atomic state transitions on RDS MySQL using transactions and idempotent writes, eliminating inconsistent payment states and duplicate updates that previously required manual reconciliation.

Software Development Engineer II 06/2020 to 07/2021
Tally Solutions Pvt Ltd – Bengaluru, Karnataka

- Developed the installer and application management system for TallyPrime Release 1.0 across 3 enterprise products, supporting installs and upgrades on Windows XP through Windows 10 for a ~2M-customer user base.
- Built native Windows system components in C/C++ using low-level Win32 APIs for application lifecycle management.

Software Development Engineer - I 01/2019 to 06/2020
Tally Solutions Pvt Ltd – Bengaluru, KA

- Optimized Jenkins-based CI/CD pipelines for a large monorepo, cutting build time from **45 minutes to 15 minutes**.
- Built financial reporting solutions for SME customers using TDL and internal tooling; contributed to feature validation and unit tests.

Software Engineer-Trainee 07/2018 to 12/2018
Tally Solutions Pvt Ltd – Bengaluru, KA

- Developed financial reporting solutions for SME customers using TDL and internal tooling.
- Built unit tests to strengthen product reliability and catch regressions earlier.

Education

Bachelor of Engineering: Computer Science 07/2018
R. V. College of Engineering - Bangalore
